

## WHY FILTERBOXX

Filterboxx Combo rental units include:

- Redundant Diesel 125kW Generators to power well site trailers and plug-in panels
- Natural Gas-powered Generator Option that includes One (1) 100kW Natural Gas Generator & One (1) 100kW Diesel Generator as backup
- Effective Wastewater Treatment Systems
- LED Light Tower, laundry amenities, and convenience features upon request

ALL SERVICES  
PROVIDED IN ONE  
LOAD TO SITE

- More COST EFFECTIVE than using multiple providers
- Equipment is serviced bi-weekly by our experienced and trained Service Technicians
- Our Regulatory and Environmental specialists audit operational data to ensure equipment is operated within compliance.

All Filterboxx wastewater treatment systems are operated under a Municipal Affairs Variance Permit or Provincial Health/ Regulatory permit as required

## BENEFITS

- Significant savings vs “pump & haul” costs
- Delivered and serviced by one provider.
- Equipment is serviced bi-weekly by our experienced and trained Service Technicians.
- Natural gas generators provide environmentally friendly options in support of reduced carbon “footprint” and ESG initiatives.

## TYPICAL LOCATIONS

- Drilling Rig Sites
- Completions Pads
- Operations & Command Centre’s
- Security Sites
- Pipeline Camps
- Construction Sites

## NATURAL GAS GENERATOR INSTALLATION SUPPLY REQUIREMENTS

### FILTERBOXX SUPPLY

- 100kW Natural Gas Generator inside Combo Unit with stand by 125kW Diesel Engine
- Safety shutdown equipment / fuel shutoff
- Natural gas alarm sensors with audible/visual alarms
- 1” female NPT connection for fuel supply on the threshold of the Combo Unit building

### CLIENT SUPPLY

- Fuel supply piping and connection to 1” female NPT fitting in Combo Unit
- Minimum 15psi fuel supply pressure to the 1” female NPT
- Minimum fuel supply volume of 38 SCM per hour / 1350 ft3 per hour / 27.5 kg per hour
- Conditioning skid in-line on fuel supply to include pressure regulation, liquid separation / filtration, and active remote monitoring.

### FUEL SUPPLY SPECIFICATION

- Fuel supply must be compressed Natural Gas (NG) within the following specifications:
  - o 75 MN (Methane Number)
  - o 70% Methane (CH4)
  - o 950-1100 BTU/SCF (HHV)
  - o ≤ 55ppm Hydrogen Sulphide (H2S)

\*\*Fuel Analysis Report may be required upon request

\*\*Maximum Allowable Hydrogen Sulphide (H2S) is 55ppm (parts per million) \*\*
